

MPM Introduces the Multi Vehicle ATF

One ATF fluid to cover your entire fleet sounds like a dream—and it is!

The various manufacturers use their own complex techniques and specific material choices, making a universal ATF impossible. However, new additive packages for ATF have made it possible to combine several MPM products into highly versatile solutions.

Which products have been updated?

The MPM **16000HFM** and **16000LV** have both been upgraded to Multi Vehicle ATF.

What does this mean for you?

The following products will be phased out:

- ★ 16000CH - replaced by 16000HFM
- ★ 16000HT - replaced by 16000HFM or 16000LV (depending on the application)
- ★ 16000MB7 - replaced by 16000LV
- ★ 16000VI - replaced by 16000LV

These products will remain visible on the MPM website under product recommendations for at least 6 more months.

How can you check if you already have the new formulation in stock?

Check the batch codes:

- ★ **16000HFM** new formulation: all batch codes from 2024
- ★ **16000LV** new formulation: all batch codes from 2024

Always consult the MPM website to find the prescribed product for your vehicle.

Find the right product

Want to make sure you choose the right product?

Check www.mpmoil.com for the prescribed product and fluid change interval.
